Alerting Abstract US A1
NOVELTY - The method involves using only one bit vector of each of several heap blocks of a heap, for performing mark-sweep-compact garbage collection in the heap, if the available space in the heap is below the
                                                                    vector of each of
```

threshold value. The heap blocks are marked, compacted or swept by only one vector of each heap block.

DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- 1.mark-sweep-compact garbage collection performing system;
- 2.method for automatically collecting garbage objects:
- 3.managed runtime system;
- 4.article comprising medium storing mark-sweep-compact garbage collection program; and
- 5.article comprising medium storing program for automatically collecting garbage objects.
- USE For performing mark-sweep-compact garbage collection in managed

Comparing mark-and sweep and stop-and-copy garbage collection

Benjamin Zorn

May 1990 Proceedings of the 1990 ACM conference on LISP and functional programming

Publisher: ACM Press

Full text available: pdf(1.02 MB)

Additional Information: full citation, abstract, references, citings, index

Stop-and-copy garbage collection has been preferred to mark-and-sweep collection in the last decade because its collection time is proportional to the size of reachable data and not to the memory size. This paper compares the CPU overhead and the memory requirements of the two collection algorithms extended with generations, and finds that mark-and-sweep collection requires at most a small amount of additional CPU overhead (3-6%) but, requires an average of 20% (and up to 40%) less memory t ...

2 A scalable mark-sweep garbage collector on large-scale shared-memory machines

Toshio Endo, Kenjiro Taura, Akinori Yonezawa

November 1997 Proceedings of the 1997 ACM/IEEE conference on Supercomputing (CDROM)

Publisher: ACM Press

Full text available: pdf(96.62 KB)

Additional Information: full citation, abstract, references, citings

This work describes implementation of a mark-sweep garbage collector (GC) for sharedmemory machines and reports its performance. It is a simple "parallel" collector in which all processors cooperatively traverse objects in the global shared heap. The collector stops the application program during a collection and assumes a uniform access cost to all locations in the shared heap. Implementation is based on the Boehm-Demers-Weiser conservative GC (Boehm GC). Experiments have been done on Ultra ...

Keywords: dynamic load balancing, garbage collection, parallel algorithm, scalability, shared-memory machine

3 The derivation of distributed termination detection algorithms from garbage collection

schemes

Gerard Tel, Friedemann Mattern

January 1993 ACM Transactions on Programming Languages and Systems (TOPLAS), Volume 15 Issue 1

Publisher: ACM Press

Full text available: pdf(2.36 MB)

Additional Information: full citation, abstract, references, citings, index terms

It is shown that the termination detection problem for distributed computations can be modeled as an instance of the garbage collection problem. Consequently, algorithms for the termination detection problem are obtained by applying transformations to garbage collection algorithms. The transformation can be applied to collectors of the "mark-and-sweep" type as well as to reference-counting protocol of Lermen and Maurer, the weighted-reference-counting protocol, the local-referen ...

Keywords: distributed algorithms, distributed termination detection, garbage collection, program transformations

4 A mark-and-sweep collector C++

🖍 Daniel R. Edelson

February 1992 Proceedings of the 19th ACM SIGPLAN-SIGACT symposium on Principles of programming languages

Publisher: ACM Press

Full text available: pdf(836.06 KB)

Additional Information: full citation, abstract, references, citings, index terms

Our research is concerned with compiler-independent, tag-free garbage collection for the C++ programming language. We have previously presented a copying collector based on root registration. This paper presents a mark-and-sweep garbage collector that ameliorates shortcomings of the previous collector. We describe the two collectors and discuss why the new one is an improvement over the old one. We have tested this collector and a conservative collector in a VLSI CAD application, and this p ...

5 Creating and preserving locality of java applications at allocation and garbage

collection times

Yefim Shuf, Manish Gupta, Hubertus Franke, Andrew Appel, Jaswinder Pal Singh November 2002 ACM SIGPLAN Notices, Proceedings of the 17th ACM SIGPLAN conference on Object-oriented programming, systems, languages, and applications OOPSLA '02, Volume 37 Issue 11

Publisher: ACM Press

Full text available: pdf(180.20 KB)

Additional Information: full citation, abstract, references, citings, index terms

The growing gap between processor and memory speeds is motivating the need for optimization strategies that improve data locality. A major challenge is to devise techniques suitable for pointer-intensive applications. This paper presents two techniques aimed at improving the memory behavior of pointer-intensive applications with dynamic memory allocation, such as those written in Java. First, we present an allocation time object placement technique based on the recently introduced notion of $p\ldots$

6 Implementing an on-the-fly garbage collector for Java

Tamar Domani, Elliot K. Kolodner, Ethan Lewis, Eliot E. Salant, Katherine Barabash, Itai Lahan, Yossi Levanoni, Erez Petrank, Igor Yanorer

October 2000 ACM SIGPLAN Notices, Proceedings of the 2nd international symposium on Memory management ISMM '00, Volume 36 Issue 1

Publisher: ACM Press

Full text available: 🔁 pdf(1.33 MB) Additional Information: full citation, abstract, citings, index terms

Java uses garbage collection (GC) for the automatic reclamation of computer memory no longer required by a running application. GC implementations for Java Virtual Machines (JVM) are typically designed for single processor machines, and do not necessarily perform well for a server program with many threads running on a multiprocessor. We designed and implemented an on-the-fly GC, based on the algorithm of Doligez, Leroy and Gonthier [13, 12] (DLG), for Java in this environment. An *on-the-f* ...

7 MC2: high-performance garbage collection for memory-constrained environments

Narendran Sachindran, J. Eliot B. Moss, Emery D. Berger

October 2004 ACM SIGPLAN Notices, Proceedings of the 19th annual ACM SIGPLAN conference on Object-oriented programming, systems, languages, and applications OOPSLA '04, Volume 39 Issue 10

Publisher: ACM Press

Full text available: pdf(503.53 KB)

Additional Information: full citation, abstract, references, citings, index terms

Java is becoming an important platform for memory-constrained consumer devices such as PDAs and cellular phones, because it provides safety and portability. Since Java uses garbage collection, efficient garbage collectors that run in constrained memory are essential. Typical collection techniques used on these devices are mark-sweep and mark-compact. Mark-sweep collectors can provide good throughput and pause times but suffer from fragmentation. Mark-compact collectors prevent fragmentation, ...

⁸ Garbage collection and task deletion in distributed applicative processing systems

Paul Hudak, Robert M. Keller

August 1982 Proceedings of the 1982 ACM symposium on LISP and functional programming

Publisher: ACM Press

Full text available: pdf(949.06 KB)

Additional Information: full citation, abstract, references, citings, index terms

The problem of automatic storage reclamation for distributed implementations of applicative languages is explored. Highly parallel distributed systems have several unique characteristics that complicate the reclamation process; in this setting, the deficiencies of existing storage reclamation schemes are thus noted. A real-time, effectively distributed, garbage collector of the mark-sweep variety, called the marking-tree collector, is shown to accomplish reclamation in parallel ...

⁹ Garbage collecting the Internet: a survey of distributed garbage collection

Saleh E. Abdullahi, Graem A. Ringwood

September 1998 ACM Computing Surveys (CSUR), Volume 30 Issue 3

Publisher: ACM Press

Full text available: pdf(337.65 KB)

Additional Information: full citation, abstract, references, citings, index terms, review

Internet programming languages such as Java present new challenges to garbage-collection design. The spectrum of garbage-collection schema for linked structures distributed over a network are reviewed here. Distributed garbage collectors are classified

first because they evolved from single-address-space collectors. This taxonomy is used as a framework to explore distribution issues: locality of action, communication overhead and indeterministic communication latency.

Keywords: automatic storage reclamation, distributed, distributed file systems, distributed memories, distributed object-oriented management, memory management, network communication, object-oriented databases, reference counting

10 A parallel, incremental, mostly concurrent garbage collector for servers

Katherine Barabash, Ori Ben-Yitzhak, Irit Goft, Elliot K. Kolodner, Victor Leikehman, Yoav Ossia, Avi Owshanko, Erez Petrank

November 2005 ACM Transactions on Programming Languages and Systems (TOPLAS), Volume 27 Issue 6

Publisher: ACM Press

Full text available: pdf(683.50 KB) Additional Information: full citation, abstract, references, index terms

Multithreaded applications with multigigabyte heaps running on modern servers provide new challenges for garbage collection (GC). The challenges for "server-oriented" GC include: ensuring short pause times on a multigigabyte heap while minimizing throughput penalty, good scaling on multiprocessor hardware, and keeping the number of expensive multicycle fence instructions required by weak ordering to a minimum. We designed and implemented a collector facing these demands building on th ...

12 A generational mostly-concurrent garbage collector

Tony Printezis, David Detlefs

October 2000 ACM SIGPLAN Notices, Proceedings of the 2nd international symposium on Memory management ISMM '00, Volume 36 Issue 1

Publisher: ACM Press

Full text available: pdf(1.67 MB)

Additional Information: full citation, abstract, citings, index terms

This paper reports our experiences with a mostly-concurrent incremental garbage collector, implemented in the context of a high performance virtual machine for the Java™ programming language. The garbage collector is based on the "mostly parallel" collection algorithm of Boehm *et al.* and can be used as the old generation of a generational

memory system. It overloads efficient write-barrier code already generated to support generational garbage collection to also ident ...

13 The treadmill: real-time garbage collection without motion sickness

Henry G. Baker

March 1992 ACM SIGPLAN Notices, Volume 27 Issue 3

Publisher: ACM Press

Full text available: pdf(464.25 KB) Additional Information: full citation, abstract, citings, index terms

A simple real-time garbage collection algorithm is presented which does not copy, thereby avoiding some of the problems caused by the asynchronous motion of objects. This inplace "treadmill" garbage collection scheme has approximately the same complexity as other non-moving garbage collectors, thus making it usable in a high-level language implementation where some pointers cannot be traced. The treadmill is currently being used in a Lisp system built in Ada.

14 An on-the-fly reference-counting garbage collector for java

Yossi Levanoni, Erez Petrank

January 2006 ACM Transactions on Programming Languages and Systems (TOPLAS),
Volume 28 Issue 1

Publisher: ACM Press

Full text available: pdf(787.15 KB) Additional Information: full citation, abstract, references, index terms

Reference-counting is traditionally considered unsuitable for multiprocessor systems. According to conventional wisdom, the update of reference slots and reference-counts requires atomic or synchronized operations. In this work we demonstrate this is not the case by presenting a novel reference-counting algorithm suitable for a multiprocessor system that does not require any synchronized operation in its write barrier (not even a compare-and-swap type of synchronization). A second novelty of thi ...

15 Mark-copy: fast copying GC with less space overhead

Narendran Sachindran, J. Eliot, B. Moss

October 2003 ACM SIGPLAN Notices, Proceedings of the 18th annual ACM SIGPLAN conference on Object-oriented programing, systems, languages, and applications OOPSLA '03, Volume 38 Issue 11

Publisher: ACM Press

Full text available: pdf(297.93 KB)

Additional Information: full citation, abstract, references, citings, index terms

Copying garbage collectors have a number of advantages over non-copying collectors, including cheap allocation and avoiding fragmentation. However, in order to provide completeness (the guarantee to reclaim each garbage object eventually), standard copying collectors require space equal to twice the size of the maximum live data for a program. We present a *mark-copy* collection algorithm (MC) that extends generational copying collection and significantly reduces the heap space required to ...

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u>

This paper presents an algorithm that performs garbage collection in distributed systems of active objects (i.e., objects having their own threads of control). Our proposition extends the basic marking algorithm proposed by Kafura in [1] to a distributed environment. The proposed garbage collector is made up of a set of local garbage collectors, one per site, loosely coupled to a (logically centralized) global garbage collector

that maintains a global snapshot of the system state relevant t ...

17 The Compressor: concurrent, incremental, and parallel compaction

Haim Kermany, Erez Petrank

June 2006 ACM SIGPLAN Notices, Proceedings of the 2006 ACM SIGPLAN conference
on Programming language design and implementation PLDI '06, Volume 41

Issue 6

Publisher: ACM Press

Full text available: 🔁 pdf(483.26 KB) Additional Information: full citation, abstract, references, index terms

The widely used Mark-and-Sweep garbage collector has a drawback in that it does not move objects during collection. As a result, large long-running realistic applications, such as Web application servers, frequently face the fragmentation problem. To eliminate fragmentation, a heap compaction is run periodically. However, compaction typically imposes very long undesirable pauses in the application. While efficient concurrent collectors are ubiquitous in production runtime systems (such as JVMs), ...

18 Controlling fragmentation and space consumption in the metronome, a real-time

garbage collector for Java

David F. Bacon, Perry Cheng, V. T. Rajan

June 2003 ACM SIGPLAN Notices, Proceedings of the 2003 ACM SIGPLAN conference on Language, compiler, and tool for embedded systems LCTES '03, Volume 38 Issue 7

Publisher: ACM Press

Full text available: pdf(354.15 KB)

Additional Information: full citation, abstract, references, citings, index terms

Now that the use of garbage collection in languages like Java is becoming widely accepted due to the safety and software engineering benefits it provides, there is significant interest in applying garbage collection to hard real-time systems. Past approaches have generally suffered from one of two major flaws: either they were not provably real-time, or they imposed large space overheads to meet the real-time bounds.Our previous work [3] presented the Metronome, a mostly non-copying real-time co ...

19 Cache performance of garbage-collected programs

Mark B. Reinhold

June 1994 ACM SIGPLAN Notices, Proceedings of the ACM SIGPLAN 1994 conference on Programming language design and implementation PLDI '94, Volume 29 Issue 6

Publisher: ACM Press

Full text available:

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u>

As processor speeds continue to improve relative to main-memory access times, cache performance is becoming an increasingly important component of program performance. Prior work on the cache performance of garbage-collected programs either argues or assumes that conventional garbage-collection methods will yield poor performance, and has therefore concentrated on new collection algorithms designed specifically to improve cache-level reference locality. This paper argues to the c ...

terms

While it is generally accepted that garbage-collected languages offer advantages over languages in which objects must be explicitly deallocated, real-time developers are leery of the adverse effects a garbage collector might have on real-time performance. Semiautomatic approaches based on regions have been proposed, but incorrect usage could cause unbounded storage leaks or program failure. Moreover, correct usage cannot be guaranteed at compile time. Recently, real-time garbage collectors have ...

Stop-and-copy garbage collection has been preferred to mark-and-sweep collection in the last decade because its collection time is proportional to the size of reachable data and not to the memory size. This paper compares the CPU overhead and the memory requirements of the two collection algorithms extended with generations, and finds that mark-and-sweep collection requires at most a small amount of additional CPU overhead (3-6%) but, requires an average of 20% (and up to 40%) less memory t ...

3 Garbage collection for virtual memory computer systems

H. D. Baecker

November 1972 Communications of the ACM, Volume 15 Issue 11

Publisher: ACM Press

Full text available: pdf(578.16 KB) Additional Information: full citation, abstract, references, citings

In list processing there is typically a growing demand for space during program execution. This paper examines the practical implications of this growth within a virtual memory computer system, proposes two new garbage collection techniques for virtual memory systems, and compares them with traditional methods by discussion and by simulation.

Keywords: garbage collection, list processing, page tables, paging, segmentation, virtual memory

4 On the usefulness of type and liveness accuracy for garbage collection and leak

detection

Martin Hirzel, Amer Diwan, Johannes Henkel

November 2002 ACM Transactions on Programming Languages and Systems (TOPLAS), Volume 24 Issue 6

Publisher: ACM Press

Full text available: pdf(684.85 KB) Additional Information: full citation, abstract, references, index terms

The effectiveness of garbage collectors and leak detectors in identifying dead objects depends on the *accuracy* of their reachability traversal. Accuracy has two orthogonal dimensions: (i) whether the reachability traversal can distinguish between pointers and nonpointers (*type accuracy*), and (ii) whether the reachability traversal can identify memory locations that will be dereferenced in the future (*liveness accuracy*). This article presents an experimental study of the impo ...

A real-time list processing system is one in which the time required by the elementary list operations (e.g. CONS, CAR, CDR, RPLACA, RPLACD, EQ, and ATOM in LISP) is bounded by a (small) constant. Classical implementations of list processing systems lack this property because allocating a list cell from the heap may cause a garbage collection, which process requires time proportional to the heap size to finish. A real-time list processing system is presented which continuously reclaims garb ...

Additional Information: full citation, abstract, references, index terms

This paper demonstrates a unified and garbage-collector independent way to describe the information required for precise collection. Thereby it is possible to construct, a library that can be used with various garbage collectors, without modifying the code of the library or the collector itself. The library design presented applies the adaptor idiom of generic programming which guarantees no overhead incurred if the library is used with manual allocators or with garbage collectors that do not re ...

18 MEDEA'05: Dusty caches for reference counting garbage collection

Scott Friedman, Praveen Krishnamurthy, Roger Chamberlain, Ron K. Cytron, Jason E. Fritts
September 2005 ACM SIGARCH Computer Architecture News, Proceedings of the
2005 workshop on MEmory performance: DEaling with Applications,
systems and architecture MEDEA '05, Volume 34 Issue 1

Publisher: IEEE Computer Society, ACM Press

Full text available: pdf(355.45 KB) Additional Information: full citation, abstract, references, index terms

Reference counting is a garbage-collection technique that maintains a per-object count of the number of pointers to that object. When the count reaches zero, the object must be dead and can be collected. Although it is cannot detect all garbage on its own, it is well suited for some applications and is implemented typically in conjunction with other methods to increase overall precision. A disadvantage of reference counting is the extra storage traffic that is introduced. In this paper, we descr ...

19 Garbage collecting the Internet: a survey of distributed garbage collection

Saleh E. Abdullahi, Graem A. Ringwood

September 1998 ACM Computing Surveys (CSUR), Volume 30 Issue 3

Publisher: ACM Press

Full text available: pdf(337.65 KB)

Additional Information: full citation, abstract, references, citings, index terms, review

Internet programming languages such as Java present new challenges to garbage-collection design. The spectrum of garbage-collection schema for linked structures distributed over a network are reviewed here. Distributed garbage collectors are classified first because they evolved from single-address-space collectors. This taxonomy is used as a framework to explore distribution issues: locality of action, communication overhead and indeterministic communication latency.

Keywords: automatic storage reclamation, distributed, distributed file systems, distributed memories, distributed object-oriented management, memory management, network communication, object-oriented databases, reference counting

20 Concurrency: Message analysis-guided allocation and low-pause incremental

garbage collection in a concurrent language
Konstantinos Sagonas, Jesper Wilhelmsson

October 2004 Proceedings of the 4th international symposium on Memory management

Publisher: ACM Press

Full text available: pdf(650.12 KB) Additional Information: full citation, abstract, references, index terms

We present a memory management scheme for a concurrent programming language

where communication occurs using message-passing with copying semantics. The runtime system is built around process-local heaps, which frees the memory manager from redundant synchronization in a multithreaded implementation and allows the memory reclamation of process-local heaps to be a private business and to often take place without garbage collection. The allocator is guided by a static analysis which speculative ...

1 Reducing sweep time for a nearly empty heap

Yoo C. Chung, Soo-Mook Moon, Kemal Ebcioğlu, Dan Sahlin

January 2000 Proceedings of the 27th ACM SIGPLAN-SIGACT symposium on Principles of programming languages

Publisher: ACM Press

Full text available: pdf(1.31 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> terms

Mark and sweep garbage collectors are known for using time proportional to the heap size when sweeping memory, since all objects in the heap, regardless of whether they are live or not, must be visited in order to reclaim the memory occupied by dead objects. This paper introduces a sweeping method which traverses only the live objects, so that sweeping can be done in time dependent only on the number of live objects in the heap. This allows each collection to use time independent ...

2 An on-the-fly mark and sweep garbage collector based on sliding views

Hezi Azatchi, Yossi Levanoni, Harel Paz, Erez Petrank

October 2003 ACM SIGPLAN Notices, Proceedings of the 18th annual ACM SIGPLAN conference on Object-oriented programing, systems, languages, and applications OOPSLA '03, Volume 38 Issue 11

With concurrent and garbage collected languages like Java and C# becoming popular, the need for a suitable non-intrusive, efficient, and concurrent multiprocessor garbage collector has become acute. We propose a novel mark and sweep on-the-fly algorithm based on the sliding views mechanism of Levanoni and Petrank. We have implemented our collector on the Jikes Java Virtual Machine running on a Netfinity multiprocessor and compared it to the concurrent algorithm and to the stop-the-world collecto ...

³ Very concurrent mark-&-sweep garbage collection without fine-grain synchronization

October 1998 ACM SIGPLAN Notices, Proceedings of the 1st international symposium on Memory management ISMM '98, Volume 34 Issue 3

Publisher: ACM Press

Full text available: pdf(1.36 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> terms

We describe a new incremental algorithm for the concurrent reclamation of a program's allocated, yet unreachable, data. Our algorithm is a variant of mark-& amp;-sweep collection that---unlike prior designs---runs mutator, marker, and sweeper threads concurrently without explicit fine-grain synchronization on shared-memory multiprocessors. A global, but infrequent, synchronization coordinates the per-object coloring marks used by the three threads; fine-grain synchronization is achieve ...

LOOM (Large Object-Oriented Memory) is a virtual memory implemented in software that supports the Smalltalk- $80(^{\text{TM}})$ programming language and environment on the Xerox Dorado computer. LOOM provides 8 billion bytes of secondary memory address space and is specifically designed to run on computers with a narrow word size (16-bit wide words). All storage is viewed as objects that contain fields. Objects may have an average size as small as 10 fields. LOOM swaps objects between primary and s ...

5 Level set and PDE methods for computer graphics

David Breen, Ron Fedkiw, Ken Museth, Stanley Osher, Guillermo Sapiro, Ross Whitaker August 2004 ACM SIGGRAPH 2004 Course Notes SIGGRAPH '04

Publisher: ACM Press

Full text available: pdf(17.07 MB) Additional Information: full citation, abstract, citings

Level set methods, an important class of partial differential equation (PDE) methods, define dynamic surfaces implicitly as the level set (iso-surface) of a sampled, evolving nD function. The course begins with preparatory material that introduces the concept of using partial differential equations to solve problems in computer graphics, geometric modeling and computer vision. This will include the structure and behavior of several different types of differential equations, e.g. the level set eq ...

6 <u>VSched: Mixing Batch And Interactive Virtual Machines Using Periodic Real-time</u> Scheduling

Bin Lin, Peter A. Dinda

November 2005 Proceedings of the 2005 ACM/IEEE conference on Supercomputing SC '05

Publisher: IEEE Computer Society

Full text available: 📆 pdf(8.96 MB) Additional Information: full citation, abstract, citings, index terms

We are developing Virtuoso, u system ,for distributed computing using virtual machines (VMs). Virtuoso must be uble to mix batch und interactive VMs on the same physical hardwure, while satisfiing constraint on re- sponsiveness und compute rates for each workload. VSched is the component of Virtuoso that provides this capability. VSched is an entirely user-level tool that interacts with the stock Linux kernel running below any type-11 virtual machine monitor to schedule VMs (indeed, any process) ...

Tuning garbage collection for reducing memory system energy in an embedded java environment

G. Chen, R. Shetty, M. Kandemir, N. Vijaykrishnan, M. J. Irwin, M. Wolczko November 2002 ACM Transactions on Embedded Computing Systems (TECS), Volume 1 Issue 1

Publisher: ACM Press

Additional Information: full citation, abstract, references, citings, index Full text available: pdf(740.23 KB)

Java has been widely adopted as one of the software platforms for the seamless integration of diverse computing devices. Over the last year, there has been great momentum in adopting Java technology in devices such as cellphones, PDAs, and pagers where optimizing energy consumption is critical. Since, traditionally, the Java virtual machine (JVM), the cornerstone of Java technology, is tuned for performance, taking into account energy consumption requires reevaluation, and possibly redesign of t ...

Additional Information: full citation, abstract, references, citings, index Full text available: pdf(348.88 KB) terms

Java workloads are becoming increasingly prominent on various platforms ranging from embedded systems, over general-purpose computers to high-end servers. Understanding the implications of all the aspects involved when running Java workloads, is thus extremely important during the design of a system that will run such workloads. In other words, understanding the interaction between the Java application, its input and the virtual machine it runs on, is key to a succesful design. The goal of this ...

Full text available: Topdf(165.32 KB) Additional Information: full citation, abstract, references, index terms

Tracing garbage collectors traverse references from live program variables, transitively tracing out the closure of live objects. Memory accesses incurred during tracing are essentially random: a given object may contain references to any other object. Since application heaps are typically much larger than hardware caches, tracing results in many cache misses. Technology trends will make cache misses more important, so tracing is a prime target for prefetching. Simulation of Java benchmarks runni ...

11 Controlling garbage collection and heap growth to reduce the execution time of Java

applications

Tim Brecht, Eshrat Arjomandi, Chang Li, Hang Pham

September 2006 ACM Transactions on Programming Languages and Systems (TOPLAS), Volume 28 Issue 5

Publisher: ACM Press

Full text available: pdf(335.24 KB) Additional Information: full citation, abstract, references, index terms

In systems that support garbage collection, a tension exists between collecting garbage too frequently and not collecting it frequently enough. Garbage collection that occurs too frequently may introduce unnecessary overheads at the risk of not collecting much garbage during each cycle. On the other hand, collecting garbage too infrequently can result in applications that execute with a large amount of virtual memory (i.e., with a large footprint) and suffer from increased execution times due to ...

12 <u>List processing in real time on a serial computer</u>

Henry G. Baker

April 1978 Communications of the ACM, Volume 21 Issue 4

Publisher: ACM Press

Full text available: pdf(1.55 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> terms

A real-time list processing system is one in which the time required by the elementary list operations (e.g. CONS, CAR, CDR, RPLACA, RPLACD, EQ, and ATOM in LISP) is bounded by a (small) constant. Classical implementations of list processing systems lack this property because allocating a list cell from the heap may cause a garbage collection, which process requires time proportional to the heap size to finish. A real-time list processing system is presented which continuously reclaims garb ...

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u>

<u>terms</u>

Stop-and-copy garbage collection has been preferred to mark-and-sweep collection in the last decade because its collection time is proportional to the size of reachable data and not to the memory size. This paper compares the CPU overhead and the memory requirements of the two collection algorithms extended with generations, and finds that mark-and-sweep collection requires at most a small amount of additional CPU overhead (3-6%) but, requires an average of 20% (and up to 40%) less memory t ...

Full text available: pdf(1.15 MB) Additional Information: full citation, abstract, references, citings

Until recently, the best performing copying garbage collectors used a generational policy which repeatedly collects the very youngest objects, copies any survivors to an older space, and then infrequently collects the older space. A previous study that used garbage-collection simulation pointed to potential improvements by using an *Older-First* copying garbage collection algorithm. The Older-First algorithm sweeps a fixed-sized window through the heap from older to younger objects, and avo ...

16 An on-the-fly reference-counting garbage collector for java

Yossi Levanoni, Erez Petrank

January 2006 ACM Transactions on Programming Languages and Systems (TOPLAS), Volume 28 Issue 1

Publisher: ACM Press

Full text available: pdf(787.15 KB) Additional Information: full citation, abstract, references, index terms

Reference-counting is traditionally considered unsuitable for multiprocessor systems. According to conventional wisdom, the update of reference slots and reference-counts requires atomic or synchronized operations. In this work we demonstrate this is not the

case by presenting a novel reference-counting algorithm suitable for a multiprocessor system that does not require any synchronized operation in its write barrier (not even a compare-and-swap type of synchronization). A second novelty of thi ...

Publication info: GB2345355 - 2000-07-05

Method for accelerating java virtual machine bytecode verification, just-in-time compilation and garbage collection by using a dedicated co-processor

Inventor: HENDLER DANNY (IL); LEVY JONATHAN (IL); Applicant: NAT SEMICONDUCTOR CORP (US)

EC: G06F9/38S4L; G06F9/445V

IPC: G06F9/38; G06F9/445; G06F9/38 (+2)

Publication info: US6473777 - 2002-10-29

Method and apparatus for assisting garbage collection process within a java virtual machine

Inventor: HUBER GARY DOUGLAS (US); MCCAULEY

Applicant: IBM (US)

DONALD WILLIAM (US)

EC: G06F12/02D2G

IPC: G06F12/02; G06F12/02; (IPC1-7): G06F17/30

Publication info: US6070173 - 2000-05-30

27 results found in the Worldwide database for:

garbage and collection in the title AND mark in the title or abstract

(Results are sorted by date of upload in database)

Leaf avoidance during garbage collection in a Java Virtual Machine

Inventor: BURKA PETER W (CA); SCIAMPACONE RYAN Applicant: IBM (US)

A(CA); (+2)

EC:

IPC: G06F17/30; G06F17/30

Publication info: US2006074990 - 2006-04-06

Efficient parallel bitwise sweep during garbage collection

Inventor: BLANDY GEOFFREY O (US)

Applicant: IBM (US)

EC:

IPC: G06F12/14; G06F12/14; (IPC1-7): G06F12/14

Publication info: US2005278487 - 2005-12-15

Work stealing queues for parallel garbage collection

Inventor: FLOOD CHRISTINE H (US); DETLEFS DAVID L Applicant: SUN MICROSYSTEMS INC (US)

(US); (+3)

EC: G06F12/02D2G4G

IPC: G06F9/46; G06F12/02; G06F17/30 (+4)

Publication info: US2005132374 - 2005-06-16

Method and system for improving the concurrency and parallelism of mark-sweep-compact garbage collection

Inventor: SUBRAMONEY SREENIVAS (US); HUDSON

RICHARD L (US) EC:

Applicant:

Applicant:

IPC: G06F17/30; G06F17/30; (IPC1-7): G06F17/30

Publication info: US2005198088 - 2005-09-08

Bit vector toggling for concurrent mark-sweep garbage collection

Inventor: SUBRAMONEY SREENIVAS (US); HUDSON

RICHARD (US)

EC: G06F12/02D2G4

IPC: G06F12/02; G06F17/30; G06F12/02 (+2)

Publication info: US2005114413 - 2005-05-26

Method and system for the garbage collection of shared data

Inventor: BORMAN SAMUEL DAVID (GB); TROTTER

Applicant: IBM (US)

MARTIN JOHN (GB)

EC: G06F12/02D2G

IPC: (IPC1-7): G06F17/30

Publication info: US2003220952 - 2003-11-27

Trace termination for on-the-fly garbage collection for weakly-

consistent computer architecture

Inventor: KOLODNER ELLIOT K (IL); LEWIS ETHAN

Applicant: IBM (US)

(IL); (+1)

EC: G06F11/34T; G06F12/02D2G4

IPC: G06F11/34; G06F12/02; G06F11/34 (+2)

Publication info: US2002120823 - 2002-08-29

Method for using cache prefetch feature to improve garbage collection algorithm

Inventor: SUBRAMONEY SREENIVAS (US); HUDSON

Applicant:

RICHARD L (US)

EC: G06F12/02D2G; G06F12/08B8

IPC: G06F12/02; G06F12/08; G06F12/02 (+2)

Publication info: US2002199065 - 2002-12-26

WORK-STEALING QUEUES FOR PARALLEL GARBAGE COLLECTION

Inventor: FLOOD CHRISTINE H; AGESEN OLE; (+3)

Applicant: SUN MICROSYSTEMS INC (US)

EC: G06F12/02D2G4; G06F12/02D2G4G

IPC: G06F12/02; G06F12/02; (IPC1-7): G06F12/00

Publication info: WO0188713 - 2001-11-22

10 Elimination of coloring during object creation for concurrent garbage collection

Inventor: LEWIS ETHAN (IL)

Applicant: IBM (US)

EC: G06F12/02D2G4

IPC: G06F12/02; G06F12/02; (IPC1-7): G06F12/00

Publication info: **US2002147899** - 2002-10-10

27 results found in the Worldwide database for:

garbage and collection in the title AND mark in the title or abstract

(Results are sorted by date of upload in database)

11 Striding-type generation scanning for parallel garbage collection

Inventor: FLOOD CHRISTINE H (US); DETLEFS DAVID L Applicant: SUN MICROSYSTEMS INC (US)

(US)

EC: G06F12/02D2G4G IPC: G06F12/02; G06F12/02; (IPC1-7): G06F17/30

Publication info: **US6526422** - 2003-02-25

12 Local allocation buffers for parallel garbage collection

Inventor: FLOOD CHRISTINE H (US); DETLEFS DAVID L Applicant: SUN MICROSYSTEMS INC (US)

(US); (+1)

EC: G06F12/02D2G4; G06F12/02D2G4G

IPC: G06F12/02; G06F17/30; G06F12/02 (+2)

Publication info: US6826583 - 2004-11-30

13 Adaptive scheduling of garbage collection in a mobile phone

Inventor: PATEL MARK ARMIN (US) Applicant: MOTOROLA INC (US)

EC: G06F12/02D2G IPC: G06F12/02; G06F12/02; (IPC1-7): G06F12/02

Publication info: GB2359647 - 2001-08-29

14 Method and system for using a mark-list for garbage collection

Inventor: DUSSUD PATRICK H (US)

Applicant: MICROSOFT CORP (US)

EC: G06F12/02D2G IPC: G06F12/02; G06F12/02; (IPC1-7): G06F12/00

Publication info: **US6622226** - 2003-09-16

15 METHOD AND SYSTEM FOR DETECTING AND UNITING IDLE AREAS

DURING COLLECTION OF GARBAGE

Inventor: KEAN JEROME KUIPAA Applicant: IBM

EC: G06F12/02D2; G06F12/02D2G IPC: G06F12/00; G06F9/44; G06F12/02 (+5)

Publication info: JP2001034532 - 2001-02-09

16 Garbage collection in an object cache

Inventor: MATTIS PETER (US); PLEVYAK JOHN (US); Applicant: INKTOMI CORP (US)

(+4)

Ec: G06F12/02D2; G06F12/02D2G IPC: G06F12/02; G06F12/02; (IPC1-7): G06F12/00

Publication info: US6209003 - 2001-03-27

17 METHOD AND DEVICE FOR OPTIMIZING ACCURATE GARBAGE COLLECTION OF ARRAY NODE IN CARD HEAP

Inventor: KNIPPEL ROSS C; BEYLIN BORIS Applicant: SUN MICROSYSTEMS INC

EC: G06F12/02D2G4G IPC: G06F12/00; G06F12/02; G06F12/00 (+2)

Publication info: **JP10301837** - 1998-11-13

18 GARBAGE COLLECTION METHOD

Inventor: SHIMURA HIROYA Applicant: FUJITSU LTD

EC: IPC: G06F12/00; G06F12/00; (IPC1-7): G06F12/00

Publication info: JP11232162 - 1999-08-27

19 GARBAGE COLLECTION EFFICIENCY INCREASING METHOD

Inventor: OTAKE KAZUO , Applicant: NIPPON ELECTRIC CO

EC: IPC: G06F12/00; G06F12/00; (IPC1-7): G06F12/00

Publication info: JP7028691 - 1995-01-31

20 COMPUTER SYSTEM FOR CONSERVATIVE STACK AND GENERATIONAL HEAP-GARBAGE COLLECTION AND METHOD

THEREOF

Inventor: JIEEMUZU ERU ADOKOTSUKU Applicant: MICROSOFT CORP

Ec: G06F12/02D2G; G06F12/02D2G4G IPC: G06F12/00; G06F12/02; G06F12/00 (+2)

Publication info: JP6095954 - 1994-04-08

27 results found in the Worldwide database for:

garbage and collection in the title AND mark in the title or abstract

(Results are sorted by date of upload in database)

21 GARBAGE COLLECTION METHOD

Inventor: SHINTANI YOSHIHIRO

Applicant: OKI ELECTRIC IND CO LTD

EC:

IPC: G06F12/00; G06F12/00; (IPC1-7): G06F12/00

Publication info: JP4049440 - 1992-02-18

22 MARKING METHOD FOR GARBAGE COLLECTION OF DATA

Inventor: AKIYAMA TOMOKO

Applicant: FUJITSU LTD

EC:

IPC: G06F12/00; G06F9/44; G06F12/00 (+2)

Publication info: JP4014152 - 1992-01-20

23 GARBAGE COLLECTION SYSTEM

Inventor: NAKAJIMA KATSUTO; NISHIKAWA HIROSHI; Applicant: AGENCY IND SCIENCE TECHN

(+1)

EC:

IPC: G06F12/02; G06F9/44; G06F12/00 (+5)

Publication info: JP2022746 - 1990-01-25

24 GARBAGE COLLECTION SYSTEM

Inventor: NAKAJIMA KATSUTO; NISHIKAWA HIROSHI; Applicant: AGENCY IND SCIENCE TECHN

(+1)

EC: Publication info: **JP2022745** - 1990-01-25

25 COORDINATE TYPE GARBAGE COLLECTION PROCESSING SYSTEM

Inventor: OZAWA TOSHIHIRO

Applicant: FUJITSU LTD

IPC: G06F12/00; G06F9/44; G06F12/02 (+10)

IPC: G06F9/44; G06F12/00; G06F12/02 (+5)

IPC: G06F12/02; G06F9/44; G06F12/00 (+5)

Publication info: JP1280849 - 1989-11-13

26 HARDWARE STACK FOR LISP MACHINE IN PARALLEL GARBAGE

COLLECTION

Inventor: TERAMURA SHINSUKE; NAKANISHI

Applicant: RICOH KK

MASAKAZU

EC:

Publication info. 1062095047 - 1000 04-16

Publication info: JP63085947 - 1988-04-16

27 GARBAGE COLLECTION SYSTEM

Inventor: KIMURA YASUNORI Applicant: FUJITSU LTD

EC: IPC: G06F9/44; G06F12/00; G06F13/00 (+5)

Publication info: **JP59119459** - 1984-07-10

2 results found in the Worldwide database for: **mark and sweep** in the title AND **heap** in the title or abstract (Results are sorted by date of upload in database)

1 Method and system for improving the concurrency and parallelism of mark-sweep-compact garbage collection

Inventor: SUBRAMONEY SREENIVAS (US); HUDSON Applicant:

RICHARD L (US)

EC: IPC: **G06F17/30**; **G06F17/30**; (IPC1-7): G06F17/30

Publication info: US2005198088 - 2005-09-08

2 Bit vector toggling for concurrent mark-sweep garbage collection

Inventor: SUBRAMONEY SREENIVAS (US); HUDSON Applicant:

RICHARD (US)

EC: G06F12/02D2G4 IPC: G06F12/02; G06F17/30; G06F12/02 (+2)

Publication info: **US2005114413** - 2005-05-26

Approximately **52** results found in the Worldwide database for: **garbage and collection** in the title AND **heap** in the title or abstract (Results are sorted by date of upload in database)

1 Compact garbage collection tables

Inventor: TARDITI DAVID R (US)

Applicant: MICROSOFT CORP (US)

EC: IPC: G06F17/30; G06F17/30

Publication info: **US7085789** - 2006-08-01

2 System and method for concurrent compacting self pacing garbage

collection using loaded value and access barriers

Inventor: TENE GIL (US); WOLF MICHAEL A (US)

Applicant: AZUL SYSTEMS INC (US)

EC: IPC: G06F17/30; G06F17/30

Publication info: **US2006155791** - 2006-07-13

3 System and method for performing garbage collection based on

unmanaged memory allocations

Inventor: DUSSUD PATRICK H (US); GEORGE Applicant: MICROSOFT CORP (US)

CHRISTOPHER S (US); (+1)

EC: IPC: G06F17/30; G06F17/30

Publication info: US2006085494 - 2006-04-20

4 GENERATIONAL GARBAGE COLLECTION METHOD AND GENERATIONAL GARBAGE COLLECTION PROGRAM

Inventor: KUROMUSHIYA KENICHI Applicant: APLIX CORP

EC: IPC: G06F12/00; G06F12/00

Publication info: JP2006039877 - 2006-02-09

5 Free item distribution among multiple free lists during garbage

collection for more efficient object allocation

Inventor: BLANDY GEOFFREY O (US)

Applicant: IBM (US)

EC: G06F12/02D2; G06F12/02D2G IPC: G06F12/00; G06F12/00; (IPC1-7): G06F12/00

Publication info: **US2005273568** - 2005-12-08

6 Assigning sections within a memory heap for efficient garbage

collection of large objects

Inventor: BLANDY GEOFFREY O (US) Applicant: IBM (US)

EC: G06F12/02D2G4 IPC: G06F12/00; G06F12/00; (IPC1-7): G06F12/00

Publication info: US2005273567 - 2005-12-08

7 GARBAGE COLLECTION FOR SMART CARDS

Inventor: TREGER JOERN (DE); PINZINGER ROBERT Applicant: GIESECKE & DEVRIENT GMBH (DE); TREGER

(DE) JOERN (DE); (+1)

EC: IPC: G06F12/02; G06F12/02; (IPC1-7): G06F12/02

Publication info: WO2005093580 - 2005-10-06

3 Work stealing queues for parallel garbage collection

Inventor: FLOOD CHRISTINE H (US); DETLEFS DAVID L Applicant: SUN MICROSYSTEMS INC (US)

(US); (+3)

EC: G06F12/02D2G4G IPC: G06F9/46; G06F12/02; G06F17/30 (+4)

Publication info: **US2005132374** - 2005-06-16

9 Method and system for multiprocessor garbage collection

Inventor: DUSSUD PATRICK H (US)

Applicant: MICROSOFT CORP (US)

EC: G06F12/02D2G4 IPC: G06F12/02; G06F12/02; (IPC1-7): G06F12/00

Publication info: **US2005033781** - 2005-02-10

10 System and method for performing garbage collection on a large heap

Inventor: DUSSUD PATRICK H (US)

Applicant: MICROSOFT CORP

EC: G06F12/02D2G4G

IPC: G06F12/00; G06F12/02; G06F12/00 (+2)

Publication info: US2005235120 - 2005-10-20

Approximately **52** results found in the Worldwide database for: **garbage and collection** in the title AND **heap** in the title or abstract (Results are sorted by date of upload in database)

11 Method and system for improving the concurrency and parallelism of mark-sweep-compact garbage collection

Inventor: SUBRAMONEY SREENIVAS (US); HUDSON Applicant:

RICHARD L (US)

EC: IPC: **G06F17/30**; **G06F17/30**; (IPC1-7): G06F17/30

Publication info: US2005198088 - 2005-09-08

12 Bit vector toggling for concurrent mark-sweep garbage collection

Inventor: SUBRAMONEY SREENIVAS (US); HUDSON Applicant:

RICHARD (US)

EC: G06F12/02D2G4 IPC: G06F12/02; G06F17/30; G06F12/02 (+2)

Publication info: **US2005114413** - 2005-05-26

13 Optimization of memory usage based on garbage collection simulation

Inventor: COHA JOSEPH A (US); KARKARE ASHISH Applicant: HEWLETT PACKARD CO (US)

(US); (+1)

EC: G06F11/34S IPC: G06F9/44; G06F9/46 (+14)

Publication info: EP1349077 - 2003-10-01

14 Method and system for the garbage collection of shared data

Inventor: BORMAN SAMUEL DAVID (GB); TROTTER Applicant: IBM (US)

MARTIN JOHN (GB)

EC: G06F12/02D2G IPC: (IPC1-7): G06F17/30

Publication info: US2003220952 - 2003-11-27

15 Apparatus, method, and program for implementing garbage collection suitable for real-time processing

Inventor: KAWAMOTO TAKUJI (JP)

Applicant:

EC: G06F12/02D2G4G IPC: G06F12/00; G06F9/44; G06F9/46 (+6)

Publication info: US2003140071 - 2003-07-24

16 Method and apparatus for performing generational garbage collection

in a segmented heap

Inventor: NAGARAJAN VIJAY G (US); ROCHETTI Applicant:

ROBERT (US); (+1)

EC: G06F12/02D2G4G IPC: G06F12/00; G06F12/02; G06F17/30 (+4)

Publication info: **US2004003014** - 2004-01-01

17 Garbage collector employing multiple-car collection sets

Inventor: GARTHWAITE ALEXANDER T (US) Applicant:

EC: G06F12/02D2G4G IPC: G06F12/02; G06F12/02; (IPC1-7): G06F12/00

Publication info: US2002161792 - 2002-10-31

18 Trace termination for on-the-fly garbage collection for weakly-

consistent computer architecture
Inventor: KOLODNER ELLIOT K (IL); LEWIS ETHAN Applicant: IBM (US)

(IL); (+1)

Publication info: US2002120823 - 2002-08-29

19 METHODS AND APPARATUS FOR OPTIMIZING GARBAGE COLLECTION

Inventor: WALLMAN DAVID Applicant: SUN MICROSYSTEMS INC (US)

EC: G06F9/40; G06F9/42M; (+1) IPC: G06F9/40; G06F9/42; G06F12/02 (+3)

Publication info: WO02054249 - 2002-07-11

20 Computer system with heap reset

Inventor: KOLODNER ELLIOT KARL (IL); LEWIS ETHAN Applicant: IBM (US)

(IL); (+3)

EC: G06F9/46A2M; G06F12/02D2G4

IPC: G06F9/50; G06F12/02; G06F9/46 (+2)

Publication info: **US2002056019** - 2002-05-09

1 result found in the Worldwide database for: **vector** in the title AND **garbage** in the title or abstract (Results are sorted by date of upload in database)

1 Bit vector toggling for concurrent mark-sweep garbage collection

Inventor: SUBRAMONEY SREENIVAS (US); HUDSON

Applicant:

RICHARD (US)

EC: G06F12/02D2G4

IPC: G06F12/02; G06F17/30; G06F12/02 (+2)

Publication info: US2005114413 - 2005-05-26

3 results found in the Worldwide database for: mark and sweep in the title AND garbage in the title or abstract (Results are sorted by date of upload in database)

Method and system for improving the concurrency and parallelism of mark-sweep-compact garbage collection

Inventor: SUBRAMONEY SREENIVAS (US); HUDSON

Applicant:

RICHARD L (US)

IPC: G06F17/30; G06F17/30; (IPC1-7): G06F17/30

Publication info: US2005198088 - 2005-09-08

Bit vector toggling for concurrent mark-sweep garbage collection

Inventor: SUBRAMONEY SREENIVAS (US); HUDSON

Applicant:

RICHARD (US)

EC: G06F12/02D2G4

IPC: G06F12/02; G06F17/30; G06F12/02 (+2)

Publication info: US2005114413 - 2005-05-26

Adaptive scheduling of garbage collection in a mobile phone

Inventor: PATEL MARK ARMIN (US)

Applicant: MOTOROLA INC (US)

EC: G06F12/02D2G

IPC: G06F12/02; G06F12/02; (IPC1-7): G06F12/02

Publication info: GB2359647 - 2001-08-29
